

# MATH 3210-001 PSet 2 Specification

Instructor: Alp Uzman

Subject to Change; Last Updated: 2025-01-17 17:45:22-07:00

---

## 1 Background

This problem set explores foundational concepts in mathematical analysis, focusing on the properties of numbers, functions, and sets. The following four (provable) **axioms** regarding numbers play a central role for this and later problem sets:

**Well-Ordering Principle:** Any nonempty subset of positive integers has a least element.

**Completeness Axiom:** Any nonempty subset of real numbers that is bounded from above has a least upper bound.

**Archimedean Property:** Any real number is dominated by some integer.

**Density of Rationals:** Any positive real number dominates some positive rational number.

Really, the Well-Ordering Principle is equivalent to the Principle of Mathematical Induction; a proof of the Completeness Axiom ultimately involves some explicit construction of  $\mathbb{R}$  from  $\mathbb{Q}$ , and the final two axioms are consequences of the Completeness Axiom. The notions of supremum and infimum are quintessential manifestations of these properties; consequently a significant part of this problem set focuses on these notions.

## 2 What to Submit

Submit your detailed solutions to each of the problems below. While the prompts may seem lengthy, the additional text is intended to guide you by providing context and helpful details.

When tackling statements in MATH 3210, follow these four steps (in no particular order):

1. **Assess the truth of the statement:** Determine, either exactly or probabilistically, whether the statement is true.
2. **Build a case:** Come up with examples or begin drafting a proof to identify potential issues or areas where the argument may break down.
3. **Construct a proof:** Provide a formal argument to support your conclusion.
4. **Perturb the statement:** Experiment with logical variations of the statement. Can you prove a stronger/weaker result, or find alternative proofs?

In this problem set, and in later problem sets as well as exams, your work must address the third step (aka constructing a proof). While

work regarding the remaining three items likely will help you write a formal proof, understand the material as well as identify connections between different concepts, you do not need to turn in generalizations or multiple proofs of the same statement, nor do you need to provide examples or counterexamples (unless you are specifically asked to). However, demonstrating these steps can contribute to partial credit when appropriate.

Statements in problems will typically be presented in neutral language. For example, a problem may simply state "P" (for P a well-defined statement) rather than "Show that P" or "Prove that P is false". Your task is to determine the truth of the statement and provide a formal proof or refutation.

If a statement is false, it is highly recommended to propose a corrected version of the statement and prove this corrected version. This process, part of "perturbing the statement", will enhance your mathematical **error detection and correction skills**.

Unless explicitly stated otherwise, all problems require proofs. If you provide an example, you must also prove that the example satisfies the necessary conditions. If you make a calculation, you must prove that your calculation is correct.

Make sure that each solution is properly enumerated and organized. Start the solution to each problem on a new page, and consider using headings or subheadings to structure your work clearly. This will not only aid in your thought process but also ensure that no part of your solution is overlooked during grading.

1. There are unique functions  $Q : \mathbb{Z}_{\geq 1} \times \mathbb{Z} \rightarrow \mathbb{Z}$  and  $R : \mathbb{Z}_{\geq 1} \times \mathbb{Z} \rightarrow \mathbb{Z}_{\geq 0}$  such that for any  $p \in \mathbb{Z}_{\geq 1}$  and  $n \in \mathbb{Z}$ :

$$n = Q(p, n)p + R(p, n) \quad \text{and} \quad R(p, n) < p.$$

2. Consider the following proof **ChatGPT** generated for the claim that  $\sup\{x \in \mathbb{Q} \mid x^2 < 2\} = \sqrt{2}$ :

<https://chatgpt.com/share/67893301-6b4c-8005-9372-c8a892453877>

In this problem your job is to critique ChatGPT's proof. Are there any gaps or mistakes in the proof, and if there are how can they be amended? **There is nothing to prove in this problem!**

3. Let  $A \subseteq \mathbb{R}$ . Then

- (a) The set of all upper bounds of  $A$  is  $[\sup(A), \infty[$ .
- (b) The set of all lower bounds of  $A$  is  $] - \infty, \inf(A)]$ .
- (c) The smallest closed interval containing  $A$  is  $[\inf(A), \sup(A)]$ .
- (d) The largest open interval contained in  $A$  is  $] \inf(A), \sup(A)[$ .

4. Let  $A, B \subseteq \mathbb{R}$ . Then

- (a)  $\sup(A \cup B) = \max\{\sup(A), \sup(B)\}$
- (b)  $\inf(A \cup B) = \min\{\inf(A), \inf(B)\}$ .

5. Consider the following functions:

- I:  $f : [-1, 1] \rightarrow \mathbb{R}, x \mapsto x^2$ .
- II:  $f : ]1, 2[ \rightarrow \mathbb{R}, x \mapsto \frac{x}{x-1}$ .
- III:  $f : [0, 1[ \rightarrow \mathbb{R}, x \mapsto 2x - x^2$ .

For each function  $f$  above, perform the following tasks.

- (a) Compute the supremum and infimum of  $f$ .
  - (b) Compute the maximum and minimum of  $f$ .
6. Let  $X$  be a set,  $f, g \in F(X; \mathbb{R})$  and  $c \in \mathbb{R}_{>0}$ . Then
- (a)  $\sup(cf) = c \sup(f)$ .
  - (b)  $\inf(cf) = c \inf(f)$ .
  - (c)  $\sup(-f) = -\inf(f)$ .
  - (d)  $\sup(f + g) \leq \sup(f) + \sup(g)$ .
  - (e)  $\inf(f + g) \leq \inf(f) + \inf(g)$ .
  - (f)  $\inf(f + g) \leq \inf(f) + \sup(g)$ .
  - (g)  $\sup(fg) = \sup(f) \sup(g)$ .
  - (h)  $\inf(fg) = \inf(f) \inf(g)$ .
  - (i)  $\sup(\min\{f, g\}) = \min\{\sup(f), \sup(g)\}$ , where  $\min\{f, g\} : X \rightarrow \mathbb{R}, x \mapsto \min\{f(x), g(x)\}$ .
  - (j)  $\sup(\max\{f, g\}) = \max\{\sup(f), \sup(g)\}$ , where  $\max\{f, g\} : X \rightarrow \mathbb{R}, x \mapsto \max\{f(x), g(x)\}$ .
  - (k)  $\sup\{f(x_1) - f(x_2) \mid x_1, x_2 \in X\} = \sup(f) - \inf(f)$ .
  - (l)  $\inf\{f(x_1) - f(x_2) \mid x_1, x_2 \in X\} = \inf(f) - \sup(f)$ .

### 3 Generative AI and Computer Algebra Systems Regulations

This section applies if you decide to use either a **generative AI tool** or a **computer algebra system** for this problem set. If not, you may skip this section.

### 3.1 Providing Logs

If you use such tools, you are required to provide logs of your interactions. Here are some ways to submit them:

- If the tool generates a URL for the interaction (e.g. [ChatGPT](#)), list such URLs in the appropriate section of the form you will be filling as part of your submission.
- For tools without direct URL generation, use an appropriate external service to archive the session. An example of such a tool that might work is the [Wayback Machine](#), see the [documentation](#) for the "Save Page Now" feature.
- If the tool allows PDF export of the interaction (e.g., Microsoft's Copilot), attach these PDFs to your Gradescope submission.

It is your responsibility to ensure that an archiving method is available for the tool you choose to use. If none of the archiving methods works, then that service is prohibited. If you use a service under the assumption that archiving is available, but it turns out not to be, you must report this in the submission form. Future assignments will be monitored accordingly.

### 3.2 Chat Guidelines; Prompt Engineering

For chatbot use, follow these guidelines:

- During the chat you may copy and paste parts of this specification document, as well as parts of the textbook or other sources.
- Directly asking the tool for complete problem solutions is prohibited.

- You are required to start any chat with a prompt that ideally would structure the chatbot's responses to you. This practice, known as **prompt engineering**, is your responsibility, and the staff will evaluate the reasonableness of your attempts. When in doubt, check with the course staff to ensure your guardrails prompt is appropriate.

Here are some guides regarding prompt engineering:

- <https://platform.openai.com/docs/guides/prompt-engineering>
- <https://developers.google.com/machine-learning/resources/prompt-eng>
- <https://www.ibm.com/topics/prompt-engineering>
- <https://aws.amazon.com/what-is/prompt-engineering/>

## 4 How to Submit

- **Step 1 of 2:** Submit the form at the following URL:

<https://forms.gle/b5RC1zcQHSj1ijxT7>.

You will receive a zero for this assignment if you skip this step, even if you submit your work on Gradescope on time.

- **Step 2 of 2:** Submit your work on Gradescope at the following URL:

<https://www.gradescope.com/courses/934441/assignments/5503411>,

see the Gradescope **documentation** for instructions.

## 5 When to Submit

This problem set is due on January 24, 2025 at 11:59 PM.

As per the course's syllabus, late submissions, up to 24 hours after this deadline, will be accepted with a 10% penalty. Submissions more than 24 hours late will not be accepted unless you contact the course staff with a valid excuse before the 24-hour extension expires.
